# Launching Backend.

- Clone git repository to any local folder.
- Navigate to the visual studio solution at "watermangoBackend/ WaterMangoBE/WaterMangoBE.sln"

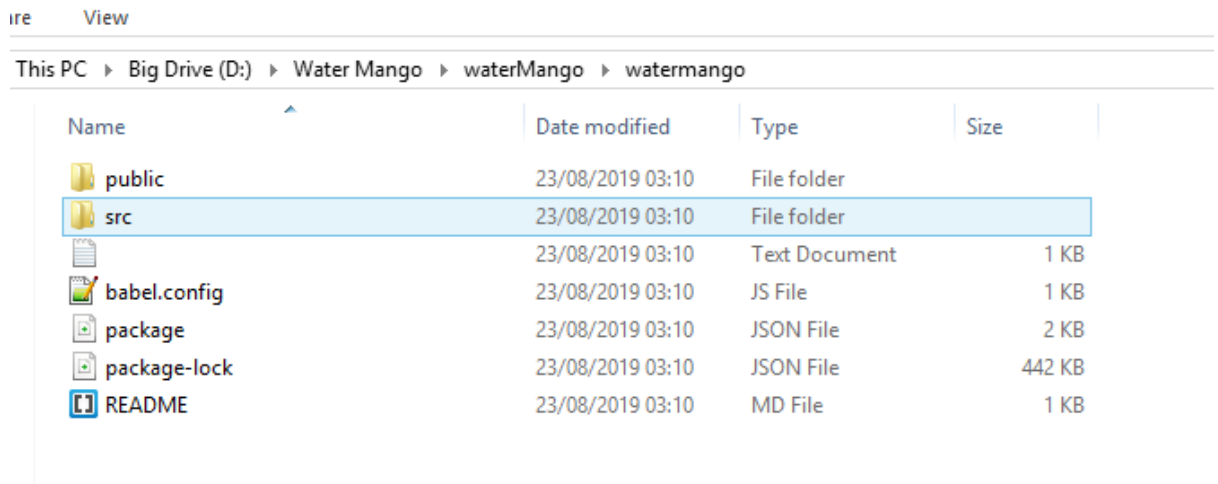

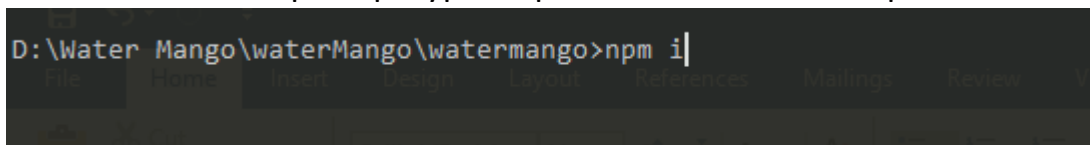

- Run solution with Visual Studio

- You should see it running at localhost:28403 port
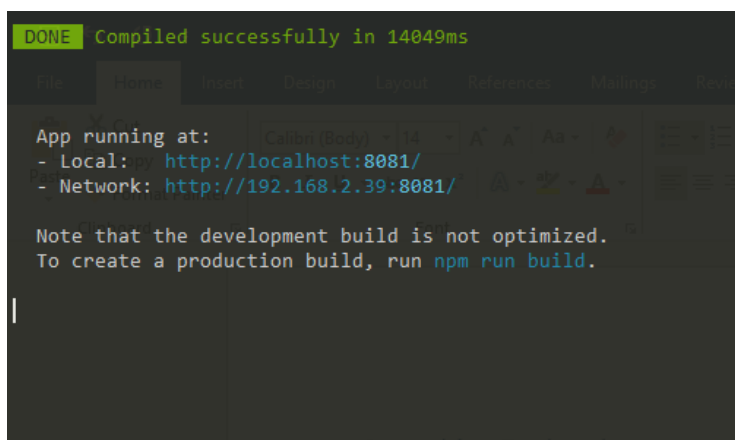

Launching Frontend
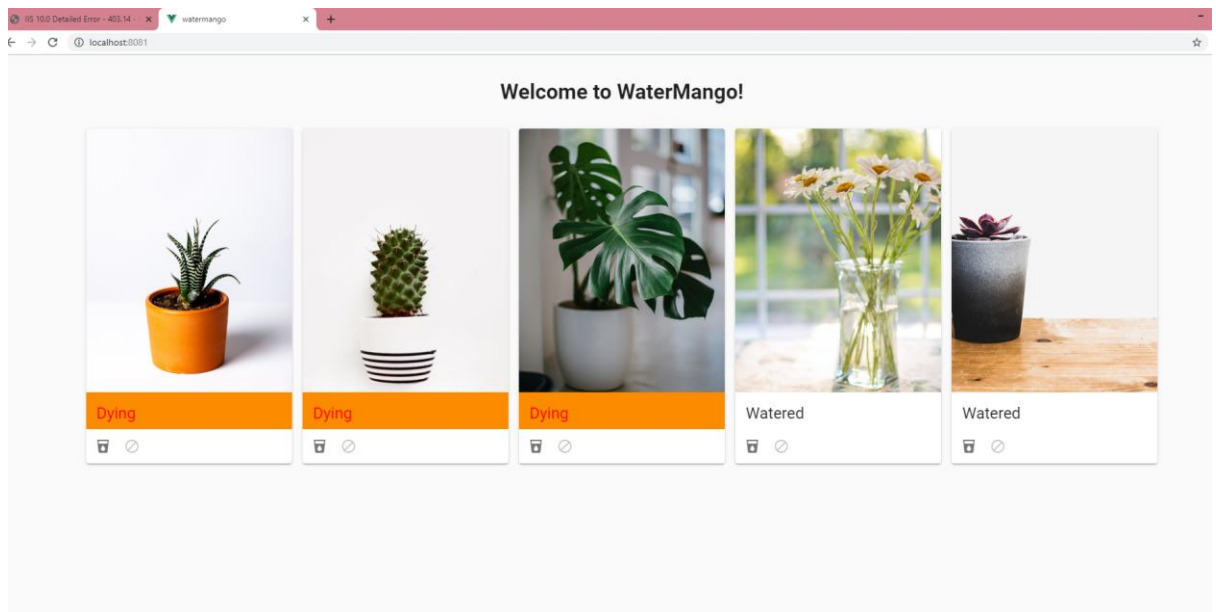

- Navigate to the frontend solution at "/watermango/"

- In this folder use shift + right click
- Select open command window here
- Once in command prompt type: "npm i" this will install dependencies

- Once all dependencies are installed type: "npm run serve"
  You should see front end running on localhost:8081

Finally Navigate to localhost:8081 and you should see the solution:

Thank you!
